SUMMARY

Junior Software QA Engineer with hands-on experience in manual testing of web-based ERP and business applications. Skilled in requirements analysis, test scenario and test case design and execution, bug reporting, regression testing, API testing using Postman, and Agile/Scrum environments. Experienced in testing end-to-end business workflows and identifying functional, UI/UX, validation, localization, data consistency, and business-rule defects.

EXPERIENCE

Software QA Engineer | Girix Solutions

July 2026 – Present | Mansoura

- Perform manual and functional testing for web-based ERP and business applications.
- Analyze business requirements and design and execute test scenarios and test cases.
- Perform functional, regression, integration, negative, validation, UI/UX, and localization testing.
- Identify, document, and track defects with clear steps to reproduce, expected/actual results, severity, and priority.
- Perform retesting and regression testing after bug fixes.
- Test end-to-end business workflows and collaborate with developers to investigate frontend, backend, and data-related issues.
- Use Jira and Postman for defect tracking and API testing.

API Testing – Internship | True Test

December 2026 – Present | Remote

- Developed and executed API testing workflows using Postman, including collection management, authentication handling, and response validation.
- Automated test execution using Collection Runner by verifying status codes, response bodies, and response times.

PROJECTS

Hotel Management System | Software QA Engineer

- Performed end-to-end manual and functional testing of a Hotel Management ERP covering Reservations, Guests, Rooms, Stays, Arrivals/Departures, Room Assignments, Room Transfers, Housekeeping, Pricing, Cashier, and Internal Accounts.
- Designed and executed test cases and scenarios covering functional, regression, negative, boundary, validation, UI/UX, localization, and cross-module testing.
- Validated complete hotel workflows including reservation, guest arrival, room assignment, stay management, room transfer, departure, and cashier operations.
- Identified, documented, and tracked functional, UI, data consistency, validation, localization, performance, and business-rule defects, including clear reproduction steps, expected/actual results, severity, and priority.
- Performed retesting and regression testing after fixes and collaborated with developers to investigate frontend, backend, API/data-mapping, and business-logic issues.

Guru Bank System (Manual Testing Project) | Software QA Engineer

- Analyzed software requirements.
- Designed comprehensive test scenarios.
- Wrote and executed manual test cases.
- Performed Functional, Regression, and End-to-End Testing.
- Reported and documented software defects.
- Participated in bug tracking using Jira.
- Prepared professional bug reports and testing documentation.

EDUCATION

Bachelor of Computers and Information | Higher Technological Institute (HTI)

10th of Ramadan | 2019 – 2024

- Graduation Project: Self Driving Car
- Graduation Project Grade: Excellent
- Overall Grade: Good

SKILLS & TOOLS

Skills

- Manual Testing
- Functional Testing
- Regression Testing
- API Testing (Postman)
- Integration Testing
- Smoke & Sanity Testing
- User Acceptance Testing (UAT)
- Test Scenario Design
- Test Case Design & Execution
- Bug Reporting & Defect Tracking
- SDLC & STLC
- Agile/Scrum

Tools

- Postman
- Jira (Zephyr & Xray)
- Azure DevOps (TFS)
- Trello
- MySQL
- Microsoft Excel
- Google Sheets

CERTIFICATES

- Software Testing – Nezam Academy
- ISTQB Foundation Level (In Progress)
- Full Stack .NET – Route Academy
